FAECAL VIRAL PANEL

Dorevitch Pathology has expanded detection of faecal pathogens by PCR by including a viral panel, complementing their existing multiplex panel detecting bacteria and parasites.

Gastroenteritis can be caused by viruses, bacteria or parasites. In children, rotavirus can cause severe disease, whereas in adults, norovirus and *Campylobacter* are common.

PCR offers superior sensitivity on detecting these pathogens (over other methods), and a faster turn around time. As the panels only detect the most common pathogens, microscopy, culture and sensitivity (MC&S) for bacteria and parasites is still required on patients.

Faecal PCR testing is performed 7 days a week.

Faecal VIRAL Panel

- Norovirus GI and GII
- Rotavirus
- Adenovirus

Request: Faecal Viral PCR

Cost: \$60

Faecal Multiplex Panel: (for bacteria and parasites)

- *Salmonella* spp
- *Campylobacter* spp
- *Shigella* spp. / Enteroinvasive *E. coli*
- *Yersinia enterocolitica*
- *Aeromonas* spp
- *Giardia* sp
- *Entamoeba histolytica*
- *Dientamoeba* sp
- *Blastocystis* spp
- *Cryptosporidium* sp

Request: Faecal Multiplex PCR

Cost: Medicare rebateable
