

Tropical Triplex Screen

Dorevitch Pathology introduces the **Tropical Triplex Molecular Screen** for returned travellers, a PCR panel identifying Chikungunya, Zika and Dengue viruses in blood. These Mosquito-borne arboviruses have rapidly expanded across the globe in recent years, and do not always show symptoms in patients initially. If your patients have been travelling in one of the areas of the world where these viruses are prevalent, and have symptoms suggesting infection with one of these viruses, it is worth considering have them tested.

Sample Required: EDTA 10mL **Run:** Once – twice per week or urgently on request **Cost:** \$85

Please consult one of our Clinical Microbiologists with any queries regarding testing on (03) 9244 0339

Map showing the estimated global distribution of Dengue, Zika, and Chikungunya*
